github.com/markfchavez

Ruby on Rails specialist with 10+ years of experience building web applications across childcare, healthcare, finance, and telecom industries. Expert in Hotwire and Stimulus for creating modern, interactive experiences with minimal JavaScript. Focused on Rails conventions, clean architecture, and pragmatic solutions that scale. Self-learner who enjoys diving deep into frameworks and solving complex technical challenges.

Work Experience

Kangarootime

Ruby on Rails Developer (senior)

2022 - 2025

Built complex agency billing solutions using Rails patterns, integrating seamlessly with existing billing infrastructure while maintaining data integrity and system performance.

Built reliable billing updates and interactive dashboard features using industry best practices, eliminating the need for heavy JavaScript frameworks while delivering responsive user experiences.

Orchestrated a complete payment processor migration with zero downtime using Rails background jobs and careful data modeling.

Bloom Solutions Inc.

Ruby on Rails Developer (mid)

2017 - 2022

Built blockchain-based ICO platform using Rails with secure wallet integration and token purchase management, handling high-value financial transactions with strict security requirements.

Developed and maintained core remittance application using Rails best practices, ensuring 99.9% uptime and maintaining data accuracy across international money transfers.

Implemented Stimulus controllers for interactive trading interfaces, providing real-time feedback without page refreshes while keeping JavaScript minimal and focused.

docker

FlexiSource Inc.

Ruby on Rails Developer (mid)

2016 - 2017

Implemented robust API integration solutions for a promotional ticketing platform, ensuring optimal performance and security.

Assisted with the development of an API backend that dynamically renders and delivers modular view components, making it easier to make changes across the application (both mobile and web).

rails-api

vuejs

YouSource Inc.

2013 - 2016

Ruby on Rails Developer (junior)

Optimized customer onboarding workflows in a Rails healthcare platform, improving processing time by streamlining form validations and database queries.

Built custom features for multi-tenant healthcare application using Rails scoping and concerns, ensuring data isolation and tenant-specific functionality.

Collaborated with stakeholders to estimate features and troubleshoot billing workflow issues using Rails debugging tools and logs.

EGG (now Yondu)

2012 - 2013

Java Developer

Developed and implemented portlets on the Liferay platform for a major telecommunications provider.

Identified and resolved critical memory management issues in a high-traffic application, resulting in improved system stability.

Implemented comprehensive diagnostic procedures to isolate processes and simplify the whole debugging workflow.

Side Projects

My Ride Log

<https://marksinmotion.bike>

Rails application that syncs cycling workout data from Strava via webhooks and visualizes training metrics with D3.js. Built to motivate consistent training through data-driven insights. Demonstrates real-time data processing and API integration patterns.

[ruby-on-rails](#) [strava-api](#) [webhooks](#) [d3.js](#)

Lynding

https://github.com/MarkFChavez/lynding_ai

A comprehensive loan management system built with Ruby on Rails, specifically designed and built for a local business.

[ruby-on-rails](#) [tailwindcss](#)

CrewKit

https://github.com/MarkFChavez/crewkit_rails

Team management system built and designed for managers and teams.

[ruby-on-rails](#) [tailwindcss](#)

lol_data_fetcher-ruby

https://github.com/MarkFChavez/lol_data_fetcher-ruby

Ruby gem that fetches champions, items, skins from League of Legends Data Dragon API

[ruby-on-rails](#) [tailwindcss](#) [data-dragon-api](#) [cli](#)

Jimny Maintenance Help

Rails-based maintenance scheduler for my Suzuki Jimny. Simple, focused application demonstrating Rails conventions for CRUD operations and domain modeling. Built following the principle that not every app needs complex JavaScript.

[ruby-on-rails](#) [server-rendered-html](#)

Axie Scholar Management

Scholar tracking and payment management system built with Rails and Hotwire. Real-time earnings updates using Turbo Streams, demonstrating how to build responsive dashboards without React or Vue. Automated payment calculations with background jobs.
